

Sayron D. Pabilando

Quezon City, Philippines | (+63) 994-811-0468 | sayrondpabilando@gmail.com | github.com/Sayron123

EDUCATION

STI College Novaliches

Bachelor of Science in Computer Engineering

Quezon City, PH

2022 – 2026

EXPERIENCE

Freelance Full-Stack Developer

2025 – Present

Ryuwanshoy (Comic Publishing Platform, Client Project)

Remote

- Built a production comic publishing platform with **Next.js 15**, **TypeScript**, and **Supabase**, designing the series → chapter → page relational schema and a dual-mode reader (scroll + page flip)
- Secured data with **Supabase Auth** and **Postgres Row-Level Security**, enforcing per-user access at the database layer; built type-safe API routes for all admin create/update/delete actions
- Migrated media storage from Cloudinary to **Cloudflare R2** and deployed on **Cloudflare Pages**, removing egress-based storage costs; processed uploads to WebP with Sharp
- Built a reusable component library with **Tailwind CSS** and **shadcn/ui** shared across the admin CMS and reader pages

QA & UI/UX Intern

Feb 2026 – May 2026

Rumble Royale

Philippines

- Ran functional and UI/UX tests on live web features; documented bugs with reproduction steps for developer triage
- Verified fixes with developers across release cycles to catch regressions before production

PROJECTS

TicketLens | IBM Bob, Custom Modes, AI Agents, Mermaid | [GitHub](#)

Sep 2026

- Built solo for the **IBM Bob 2.0 Hackathon** (lablab.ai): an IBM Bob custom mode that turns vague client tickets into verified code changes in unfamiliar codebases
- Designed a 7-step agent workflow (read, translate, map, plan, change, verify, handoff) with two developer approval gates and parallel read-only subagents that map data flow, UI, and conventions
- Cut handling time on two real client tickets from **60+ minutes to ~22 minutes**, using 5.47 of 40 Bob coins

StuB – AI Study Buddy | FastAPI, Vue 3, MongoDB Atlas, Gemini API, JWT

Feb 2026 – Mar 2026

- Built document-scoped AI chat with **Gemini API** and **FastAPI**, answering only from student-uploaded materials to reduce hallucinated answers
- Designed a REST API with bcrypt-hashed JWT auth over a multi-user MongoDB Atlas backend, no third-party auth provider
- Built the Vue 3 + Pinia frontend with flashcard generation, quiz creation, and dark mode

Guardner – Automated Smart Garden (Thesis) | IoT, Embedded Systems, Mobile App

2024 – 2025

- Designed an IoT system automating watering, fertilizer dispensing, insecticide control, and pH monitoring
- Owned the full pipeline from sensor layer and hardware integration to a mobile app for real-time remote monitoring

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks: Next.js 15 (App Router), React, Vue 3, FastAPI, Tailwind CSS, shadcn/ui

Databases & Cloud: Supabase (Postgres, Auth, RLS), MongoDB Atlas, Firebase, Cloudflare R2, Cloudflare Pages

Tools: Git, GitHub, Docker, REST APIs, JWT, Figma

AI Tools: IBM Bob, Claude Code, Gemini API, Ollama

HACKATHONS & CERTIFICATIONS

IBM Bob 2.0 Hackathon – Certificate of Completion, lablab.ai (Sep 2026)

Cloud Technical Series: AI in Action – Google Cloud APAC (2026)

Foundations of PHP Web Development (Mar 2026) · **Cybersecurity Fundamentals** (2025) · **IoT & Data-Driven Governance** (2025)
